

## AI and Data in Education - An Ethical Reflection

The seminar critically reflects on perspectives and challenges of AI-based systems in education by evaluating case studies and existing technologies. It focuses particularly on related ethical considerations and also introduces relevant legal frameworks. The goal of the seminar is to equip future education and training professionals as well as system designers with the skills and mindset to engage in an informed and reflective use of AI in education.

Important: The course will be conducted in English!

This seminar offers 10 places and is available only for students in the Teaching program Computer Science, for Data Science students as well as for Media Informatics students.

The course will be offered as some kind of block course. Please check C@mpus for details.
